

ALBIOMA

Press release

Paris La Défense, 10 July 2025

Albioma is investing in energy transition in French Guiana through its acquisition of the Corossony photovoltaic plant

Albioma is today announcing its acquisition of the Corossony savannah ground-mounted photovoltaic plant in Sinnamary, French Guiana.

The 1 MWp facility has been in operation for several years, and was previously owned by a group of West Indian entrepreneurs. The contract for the photovoltaic plant runs until December 2031.

Following on from this acquisition, Albioma plans to carry out a major repowering project in 2025 to increase its production capacity. This operation, carried out entirely in-house by Albioma's teams based in French Guiana, draws on local expertise that has been recognised for over 20 years, guaranteeing complete control of the project and continuity of service.

Thanks to repowering, all panels that are currently defective will be replaced by 4,048 latest-generation photovoltaic modules. This upgrade will increase the installed capacity to 1.86 MWp, giving an annual output of around 2,800 MWh. This volume of energy corresponds to the consumption of around 500 homes in French Guiana.

This project is fully in line with Albioma's drive for energy transition in French Guiana, where electricity needs are growing, given the country's rapidly expanding population.

Leslie Bocaly, Director of Solaire Antilles Guyane, said: *"This plant will add to Albioma's installed base in French Guiana, which is already the region's leading producer of photovoltaic electricity. Our teams will quickly get down to work to launch the repowering project. Through this acquisition, we are confirming our role in driving energy transition in overseas France."*

About Albioma

The Albioma Group is committed to energy transition through renewable energies (biomass, solar and geothermal).

It operates in the French overseas territories, mainland France, Mauritius, Brazil, Canada, Australia and Turkey.

For over 30 years, it has developed a unique partnership with the sugar industry to produce renewable energy from bagasse, the fibrous residue of sugar cane.

Albioma is also the leading producer of photovoltaic energy in the French overseas territories, where it builds and operates innovative facilities with integrated storage, as well as in mainland France.

Since 2021, the Group has been expanding into the geothermal energy market, with the acquisition of two power plants in Turkey.
