

ALBIOMA

Press release

Paris La Défense, 21 september 2026

Pierre Santoul appointed President of Albioma

Albioma announces the appointment of Pierre Santoul as President. He succeeds Frédéric Moyne, who is stepping down from his role.

Albioma is a renewable energy producer committed to supporting the energy transition in the regions where it operates. Building on its expertise in biomass, solar power and geothermal energy, the Group continues to diversify its activities with its return to wind power, a technology it pioneered in France. Albioma is also accelerating its international expansion, particularly in the United States, where it established its first industrial presence in 2026.

Pierre Santoul was previously Chief Executive Officer of Tereos Brazil and a member of the Group Executive Committee. He brings more than 30 years of international leadership experience across the industrial, agricultural and renewable energy sectors, with a strong track record in operational performance, transformation and sustainable growth.

Pierre Santoul, President of Albioma: "It is a privilege to lead Albioma, a company with a strong identity, talented teams and an essential role to play in the energy transition across France's overseas territories. Our ambition is to continue serving our customers to the highest standards while delivering profitable growth."

Ryan Miller, Managing Director at KKR and Chairman of Albioma's Supervisory Board: "We are delighted to welcome Pierre Santoul as President. Pierre is an outstanding leader. His extensive management experience in renewable energy and industrial operations makes him ideally suited to lead the company through its next phase of growth. On behalf of the Supervisory Board, I would also like to extend my sincere thanks to Frédéric Moyne for his contribution to Albioma's development. He leaves behind a strong company, with highly regarded teams, high-quality industrial assets and a robust development pipeline. We wish him every success in the next chapter of his career."

About Albioma

Albioma is an energy producer committed to advancing the energy transition through biomass, solar power and geothermal energy. The Group operates in the French overseas territories, mainland France, the United States, Mauritius, Brazil, Canada, Australia and Türkiye.

For more than 30 years, it has developed a unique partnership with the sugar industry to produce renewable energy from bagasse, the fibrous residue left after sugar cane processing.

Albioma is also the leading producer of solar power in the French overseas territories, where it develops and operates innovative projects incorporating energy storage, as well as in mainland France. Since 2021, the Group has been expanding into geothermal energy, including through the acquisition of two power plants in Türkiye. Albioma builds long-term relationships with its partners to ensure the production of reliable and sustainable energy. Our teams develop and implement bespoke solutions to accelerate the energy transition.
